

## TABLE OF CONTENTS

### Introduction

### Chapter I. Kac-Moody Algebras – Basic Theory

1. Definition of Kac-Moody algebras
2. Root space decomposition
3. Weyl groups associated to Kac-Moody algebras
4. Dominant chamber and Tits cone
5. Invariant bilinear form and the Casimir operator

### Chapter II. Representation Theory of Kac-Moody Algebras

1. Category  $\mathcal{O}$
2. Weyl-Kac character formula
3. Shapovalov bilinear form

### Chapter III. Lie Algebra Homology and Cohomology

1. Basic definitions and elementary properties
2. Lie algebra homology of  $\mathfrak{n}$  – Results of Kostant-Garland-Lepowsky
3. Decomposition of the category  $\mathcal{O}$  and some Ext vanishing results
4. Laplacian calculation

### Chapter IV. An Introduction to Ind-varieties and Pro-groups

1. Ind-varieties - Basic definitions
2. Ind-groups and their Lie algebras
3. Smoothness of ind-varieties
4. An introduction to pro-groups and pro-Lie algebras

### Chapter V. Tits Systems - Basic Theory

1. An introduction to Tits systems
2. Refined Tits systems

### Chapter VI. Kac-Moody Groups : Basic Theory

1. Definition of the Kac-Moody groups and their parabolic subgroups
2. Representations of Kac-Moody groups

## Chapter VII. Generalized Flag Varieties of Kac-Moody Groups

1. Generalized flag varieties – Ind-variety structure
2. Line bundles on  $\mathcal{X}^Y$
3. Study of the group  $\mathcal{U}^-$
4. Study of the group  $\mathcal{G}^{\min}$  defined by Kac-Peterson

## Chapter VIII. Demazure and Weyl-Kac Character Formulas

1. Cohomology of certain line bundles on  $Z_{\mathfrak{w}}$
2. Normality of Schubert varieties and Demazure character formula
3. Extension of Weyl-Kac character formula and Borel-Weil-Bott theorem

## Chapter IX. BGG Resolution

1. Algebraic proof - symmetrizable case
2. A combinatorial description of the BGG resolution
3. Kempf resolution

## Chapter X. Conjugacy Theorems and Defining Equations of $\mathcal{G}/\mathcal{P}$

1. Quadratic generation of defining ideal of  $\mathcal{G}/\mathcal{P}$
2. Conjugacy theorems for Lie algebras
3. Conjugacy theorems for groups

## Chapter XI. Topology of Kac-Moody Groups and Their Flag Varieties

1. The nil Hecke ring
2. Determination of  $\bar{R}$
3.  $T$ -equivariant cohomology of  $\mathcal{G}/\mathcal{B}$
4. Positivity of the cup product in cohomology of flag varieties
5. Degeneracy of the Leray-Serre spectral sequence for the fibration  $\mathcal{G} \rightarrow \mathcal{G}/T$

## Chapter XII. Smoothness and Rational Smoothness of Schubert Varieties

1. Singular locus of Schubert varieties
2. Rational smoothness of Schubert varieties

## Chapter XIII. An Introduction to Affine Kac-Moody Lie Algebras and Groups

1. Affine Kac-Moody Lie algebras
2. Affine Kac-Moody groups

## Appendix A. Results from Algebraic Geometry

## Appendix B. Local Cohomology

## Appendix C. Equivariant Cohomology

## Bibliography

## Index of Notation
